## **DETAILED ACTION**

## Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Claim 2, drawn to the special technical feature: a scribe line forming apparatus having a control unit which controls driving of the vertical crack forming member and the control unit drives the impact force applying means when the blade is positioned in the vicinity of a passing point.
- II. Claim 3, drawn to the special technical feature: a scribe line forming apparatus having a heating means with a servo mechanism that detects a change in the height of the surface and adjusts the focal point of a laser, and includes a laser beam oscillator which is adjusted in response to a detection.
- III. Claim 4, drawn to the special technical feature: a scribe line forming apparatus having a cooling means that move in conjunction with the vertical crack forming member.
- IV. Claim 6, drawn to the special technical feature: a scribe line forming apparatus having adjustable arrangement movement means, such that the

- vertical crack forming member, the heating means and the cooling means can change position relative to one another.
- V. Claim 7, drawn to the special technical feature: a scribe line forming apparatus having a cooling means with a servo mechanism that adjusts the height thereof.
- VI. Claim 8, drawn to the special technical feature: a scribe line forming apparatus having a glass cutter with a 'rollable' wheel tip.
- VII. Claim 9, drawn to the special technical feature: a scribe line forming apparatus having a predetermined laser beam oscillator.
- VIII. Claim 10, drawn to the special technical feature: a scribe line forming apparatus having a cooling means comprising a nozzle and a cooling medium released therefrom.
- IX. Claim11, drawn to the special technical feature: a scribe line forming apparatus having an armature that generates movement inertia for pressing the blade against the surface of the substrate including a solenoid switch.
- X. Claim12, drawn to the special technical feature: a scribe line forming apparatus having either a laser displacement gauge or a contact displacement gauge.
- XI. Claim13, drawn to the special technical feature: a scribe line forming apparatus having the brittle substrate be only an LCD, a glass for plasma display or a Glass for organic EL display.

- XII. Claims 14 and 15, drawn to the special technical feature: a scribe line forming method including the steps of making a vertical crack forming member move on a substrate forming an irradiation area and a cooling area.
- 2. It has been determined that claims 1 and 5 do not have a special technical feature, claims 1 and 5 will be examined with the elected group. See 37 CFR 1.476 d. If claim 1 is later allowed, claims dependent therefrom will be rejoined.
- 3. The inventions listed as Groups I-XI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: as seen above, each pair of groups contains a feature not found in the other groups, which is a special technical feature, and which may be relied upon in a determination of patentability. As such they are separately patentable and should not be considered the same invention, as evidenced by their clear distinctions between each group.

## Conclusion

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

10/533,650

Art Unit: 3724

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean M. Michalski whose telephone number is 571-272-6752. The examiner can normally be reached on M-F 7:30AM - 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Boyer Ashley can be reached on 571-272-4502. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
